

OGC

Open Standards Code Sprint

#Day 0 – Pre-event webinar

Joana Simoes

22/04/2026

What is OGC?

Our Vision

Building the future of location with community and technology for the good of society.

Our Mission

Make location Information Findable, Accessible, Interoperable and Reusable (FAIR)

Our Approach

A proven collaborative and agile process combining consensus-based standards, innovation project and partnership building.

Some advantages of adopting Standards

- Server side: enable a wide range of clients to consume services (e.g.: no need to create custom clients).
- Client side: being able to consume services from a wide range of servers (e.g.: add support to more sources with minimal coding).
- More data access, less coding.

OGC Code Sprints

Thank You to our Sponsors!

■ Thank You to our Host!

GEOVATION

London, UK

GEOVATION HUB

When you arrive, please check-in at the main desk and they will tell you where to get the elevator for the 4th floor.

Quadrant Room

Sutton Yard, 65 Goswell Road, London, EC1V 7EN

What happens during the code sprint?

Tutorials – days 1, 2 and 3

Mentor Stream Onboarding

@MS Teams: May 11, 10:20 - 10:40 UTC+1

Open to All OGC standards

Standards Working Groups that have registered for this code sprint:

register

Registration is free for everyone. You may register [here](#). At the time of the event, only registered participants will have access to the relevant Discord channels.

Which OGC Standards Working Groups Are Going to Participate?

- GeoHEIF
- OGC API - Environmental Data Retrieval (EDR)
- OGC API - Maps
- OGC API - Coverages

Mentor Streams

If you are coming to an OGC Builder Days Code Sprint for the first time, you may be a little lost and confused about what you should do when you get there. That is why we will have an onboarding day, to help you get started in the OGC Community. In the Discord server, you will find a section called "mentoring", which contains multiple channels. On day 1 of the code sprint, we will feature a stream of tutorials at TBA.

GIMI is our topic these days as part of our contributions to Testbed 21. We are implementing a map client that already shows some still imagery and will soon show tiled still imagery. In the sprint we would like to test some GIMI files and continue the support as many variants of these files as possible to completely finalize our implementations. In addition we could also work on showing the metadata that we can extract from the file.
